

SDK RESIDENZEN
SuperDrecksKëscht®

The solution for climate protection and resource conservation in your residence !

SDK Residenzen

SDK provides sustainability advice to reduce your residual waste and increase climate and resource protection through correct separate waste collection and prevention in your residence.

Your advantages with SDK Residenzen

Reduce your residual waste

Convenient disposal of your household waste

Enable recycling through your separate waste collection

Reduce your costs by 20- 40% by minimizing the amount of residual waste

Use a safe and clean waste storage area

Your home is conform to the modified waste management law of 21 March 2012

Coordinated with the *Chambre Immobilière du G.-D.* and the *Groupement des Syndicats Professionnels du Luxembourg*

SDK Residenzen service

Services for property managers (syndic):

- Coaching on the autonomous establishment and implementation of waste separation in accordance with the legal requirements (modified waste management law of 21 March 2012) in residences.
- Train the practical implementation.
- Training in the use of our simulation tool for calculating the probable amount of waste of the respective buildings.
- Providing visual and interactive awareness-raising material aimed at residents.

Licence:

The licence is an acknowledgement of the property management company's commitment to conserving resources and protecting the climate.

- Independent adaptation and implementation of concepts in compliance with SDK guidelines.
- Possibility of transferring this expertise to all buildings under their contract.
- Improved efficiency of the technical service.
- Generate additional income by offering new services.
- Visible commitment to secure and sustainable waste disposal.
- (Access to further information material, customer portal, events, etc.)

Services for residences / Residenzen check:

- Inventory and analysis of the locations, taking into account local characteristics.
- Development of a concept for management and collection.
- Sale and installation of a collecting point.
- Continuous support for the residence.
- Simulation of the savings potential.

Label:

The SDK label is an ISO 14024-certified quality mark for environmentally friendly waste management. The residence is recognised for its commitment to conserving resources and protecting the climate.

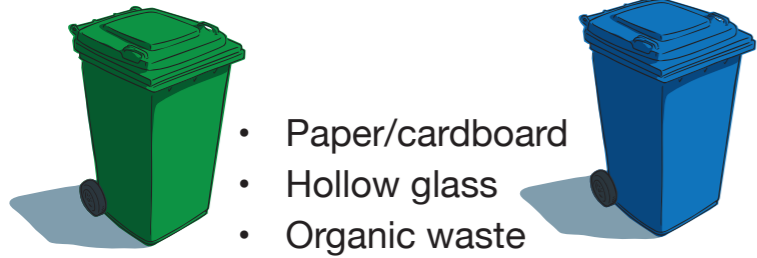

- Free analysis within the label check.

The SDK label - an award for commitment to resource and climate protection to make all residents proud !

 Colour-contaminated
 products and pens/glue,
 batteries
 (incl. safety concept)

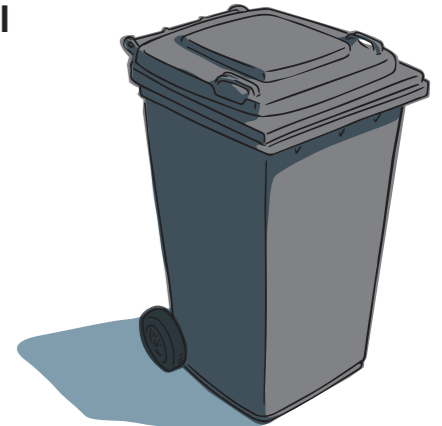

The **SDK Residenzen** concept
 is composed of several modules
 enabling an optimal waste
 separation.

Residual waste disposal

Is anything left?

A smart waste container
 ensures optimised waste
 collection.

The smart waste container saves costs and protects the climate

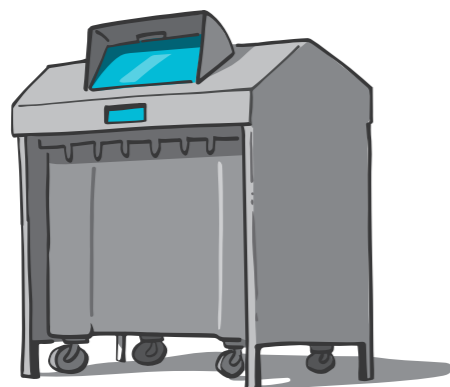

Save costs and protect the climate with the smart waste container system

The smart waste container is a system for collecting residual waste in the residence. It registers how often a resident uses it. In addition, the weight of each disposal can now be recorded on request.

Advantages:

- Significantly less residual waste, saving resources and protecting the climate
- Lower waste charges
- Simple and safe operation
- Billing according to the polluter pays principle (pollueur payeur)
- Customized billing
- Secure data transmission
- Solution for indoor and outdoor areas

Video

Advices for climate and resource protection for your daily life:

Shop Green:

With the campagne „**Shop Green – Your label for sustainable products in Luxembourg**“ the SDK aims at increasing the visibility of ecologic products in shops and help consumers make environmentally correct choices. For this purpose, supermarkets and retailers mark these productions with the label **Shop Green**.

Repair and share:

Do I always need a new one? Do I always need to own one? Repairing and sharing can be great alternatives for saving money and space. And that helps not only you, but the environment too. By repairing and sharing you are actively helping to save valuable and ever scarcer resources and you are also saving the environment from unnecessary waste. With this platform we help you search for and find a company that will repair your non-working item or hire out to you the item you need. You get in direct contact with the company and sort out all the necessary details.

Ecobox:

The Ecobox is Luxembourg's return-and-refill system to take away food and leftovers. Regardless of whether in a restaurant, in a canteen or at the take-away, the Ecobox can be used almost anywhere. You will find all participating companies offering the Ecobox on www.ecobox.lu.
