Goal:

Reducing residual waste

In general, the objective is to largely reduce the amount of residual waste by separate collection and valorisation of various end-of-life products.

Safety and cleanliness

Separate collection reduces the quantity and the potential danger of residual waste.

Recycling

Separate collection enables recycling and thus the recovery of secondary raw materials.

Example of a waste room (Local poubelle)

Municipal waste disposal

VALORLUX (Packages)

- ▶ Plastic bottles and flacons
- ▶ Metal packaging
- ▶ Beverage cartons
- ▶ Plastic foils and bags
